def sn1998bw_template(time, redshift, amplitude, **kwargs):
    """
    A wrapper to the SN1998bw template. Only valid between 1100-11000 Angstrom
    and 0.01 to 90 days post explosion in rest frame

    Parameters
    -----
    time
        time in days in observer frame (post explosion)
    redshift
        redshift
    amplitude
        amplitude scaling factor, where 1.0 is the original brightness of
    SN1998bw; and f_lambda is scaled by this factor
    kwargs
        Additional keyword arguments required by redback.
    frequency
        Required if output_format is 'flux_density'. frequency to calculate -
    Must be same length as time array or a single number).
    bands
```

```

    Required if output_format is 'magnitude' or 'flux'.
    output_format
        'flux_density', 'magnitude', 'spectra', 'flux', 'sncosmo_source'
    cosmology
        Cosmology to use for luminosity distance calculation. Defaults to
        ↪ Planck18. Must be a astropy.cosmology object.
    Returns
    -----
        set by output format - 'flux_density', 'magnitude', 'spectra', 'flux',
        ↪ 'sncosmo_source'
